

Security Risk Assessment Services

Go beyond compliance

How robust is your risk assessment program? Do you struggle to exceed basic HIPAA compliance? Without a thorough analysis of your risks, you could be leaving your healthcare organization vulnerable to the full consequences a security incident could create. With our comprehensive HIPAA and NIST Risk Assessment Services, we can help you meet and often exceed regulatory requirements.

Your partner in cybersecurity

We get it - you've got a lot to juggle. You need a risk assessment to stay compliant, but you also need insight into your current cybersecurity posture and what your path to better cyber maturity might look like. And you also have to keep your executive team informed on progress.

That's why Fortified partners with you to develop a plan that addresses your unique goals and objectives. Your assigned Security Compliance Advisor will be with you every step of the way, from assessing your risk profile to providing strategic guidance on how to best prioritize and work through your Corrective Action Plan (CAP).

Fortified's Security Risk Assessment Services bring an accountability structure to the process that can help transform the way your organization manages risks.

Our model includes:

Monthly meetings to review assessment progress and outstanding deliverables

A prioritized list of findings and recommendations

A Corrective Action Plan (CAP) to help you begin the remediation process

A final report and executive summary that you can share with key stakeholders

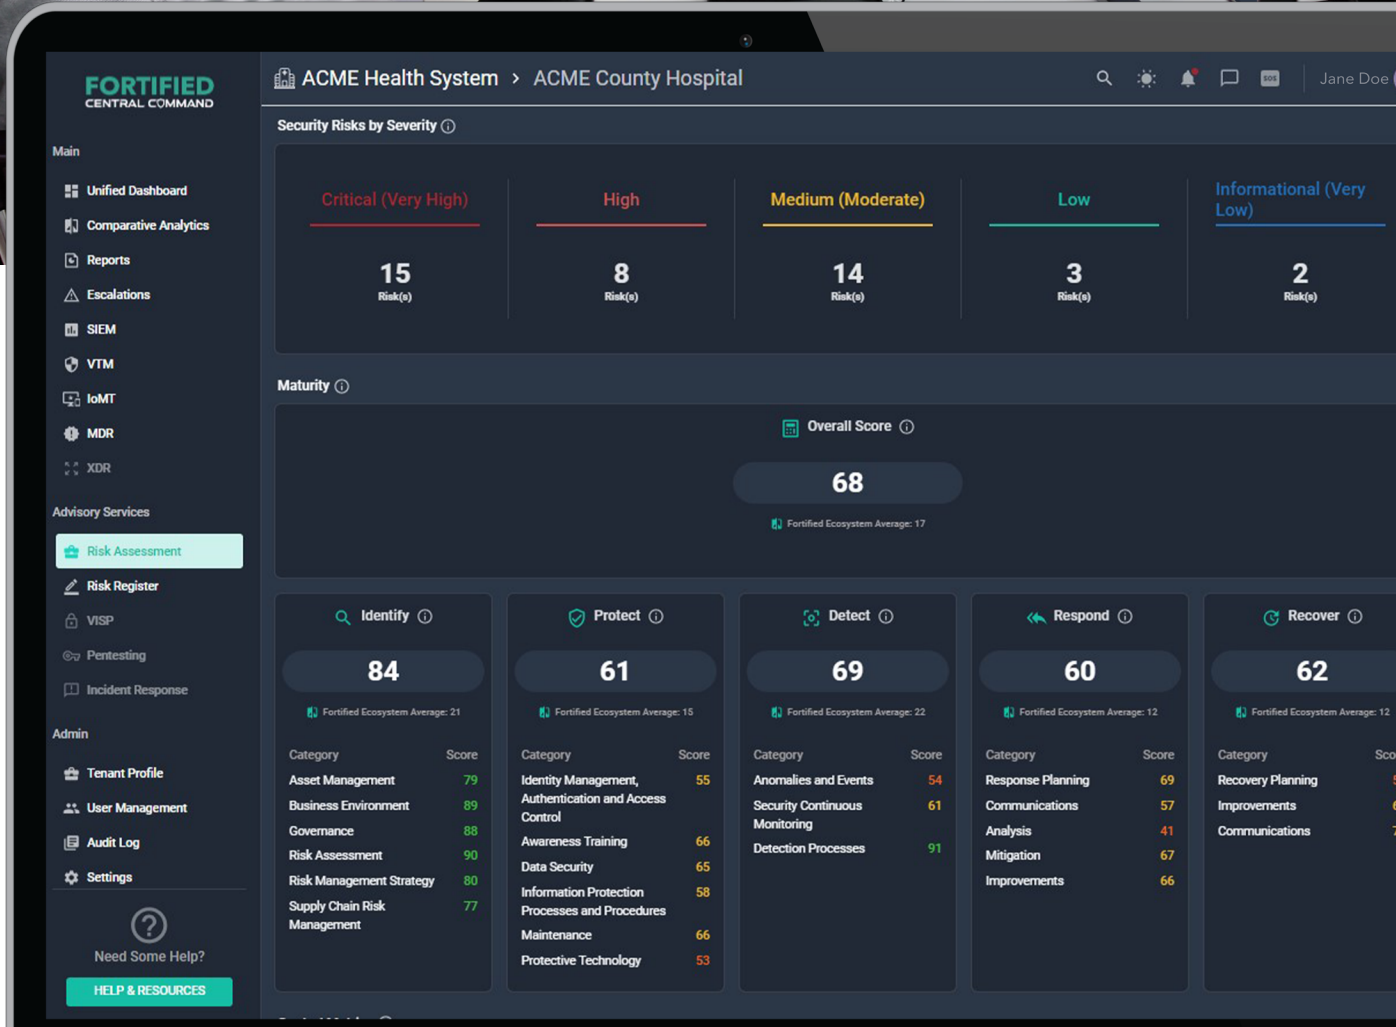

Central Command is Cyber Made Simple

Risk Assessment Services are delivered through Fortified Central Command. The platform, which you can access on desktop or mobile, allows you to:

- View timelines and monitor progress
- Upload and store required documents
- Maintain vigilance in achieving your Corrective Action Plan (CAP)
- Automatically add risks identified by other Fortified services
- Manually add new risks
- Benchmark your performance against Fortified's client ecosystem
- Add optional risk register services

Cover all your bases

Often, the choice between a HIPAA or NIST assessment is based on your cyber maturity. Choose the Fortified Risk Assessment service that best aligns with your objectives.

	HIPAA Risk Assessment Good for organizations without existing framework or third-party support	NIST Risk Assessment Good for organizations further along in their cyber maturity
Full assessment & gap analysis	X	X
Prioritized list of findings	X	X
Remediation recommendations	X	X
Monthly Corrective Action Planning (CAP) calls	X	X
Final report & executive summary	X	X
Ongoing engagement & partnership	X	X
Physical site assessment	X	X
Number of controls evaluated	64	108

Fortified can also crosswalk your assessment results to other frameworks, such as 405d, HIPAA privacy, & ISO

Expert assistance to help execute your Corrective Action Plan

Like many healthcare organizations, you may have resource constraints and knowledge gaps that interfere with addressing your findings and accomplishing your goals.

Fortified offers numerous services to help you execute your CAP and improve your cybersecurity posture, including:

- Virtual CISO Services
- Advanced Penetration Testing
- Vulnerability Threat Management (VTM)
- Threat Defense services, such as Managed SIEM, Managed EDR, and IoMT
- Incident Response Services
- Business Impact Analysis
- Third-Party Risk Management (TPRM)

About Fortified:

A winner of multiple Best in KLAS awards, Fortified works with healthcare organizations to construct client-centric, customized information security programs which leverage both new and existing solutions.
